

Machine Learning Operations

02457 Machine Learning Operations

Nicki Skafte Detlefsen,

Postdoc

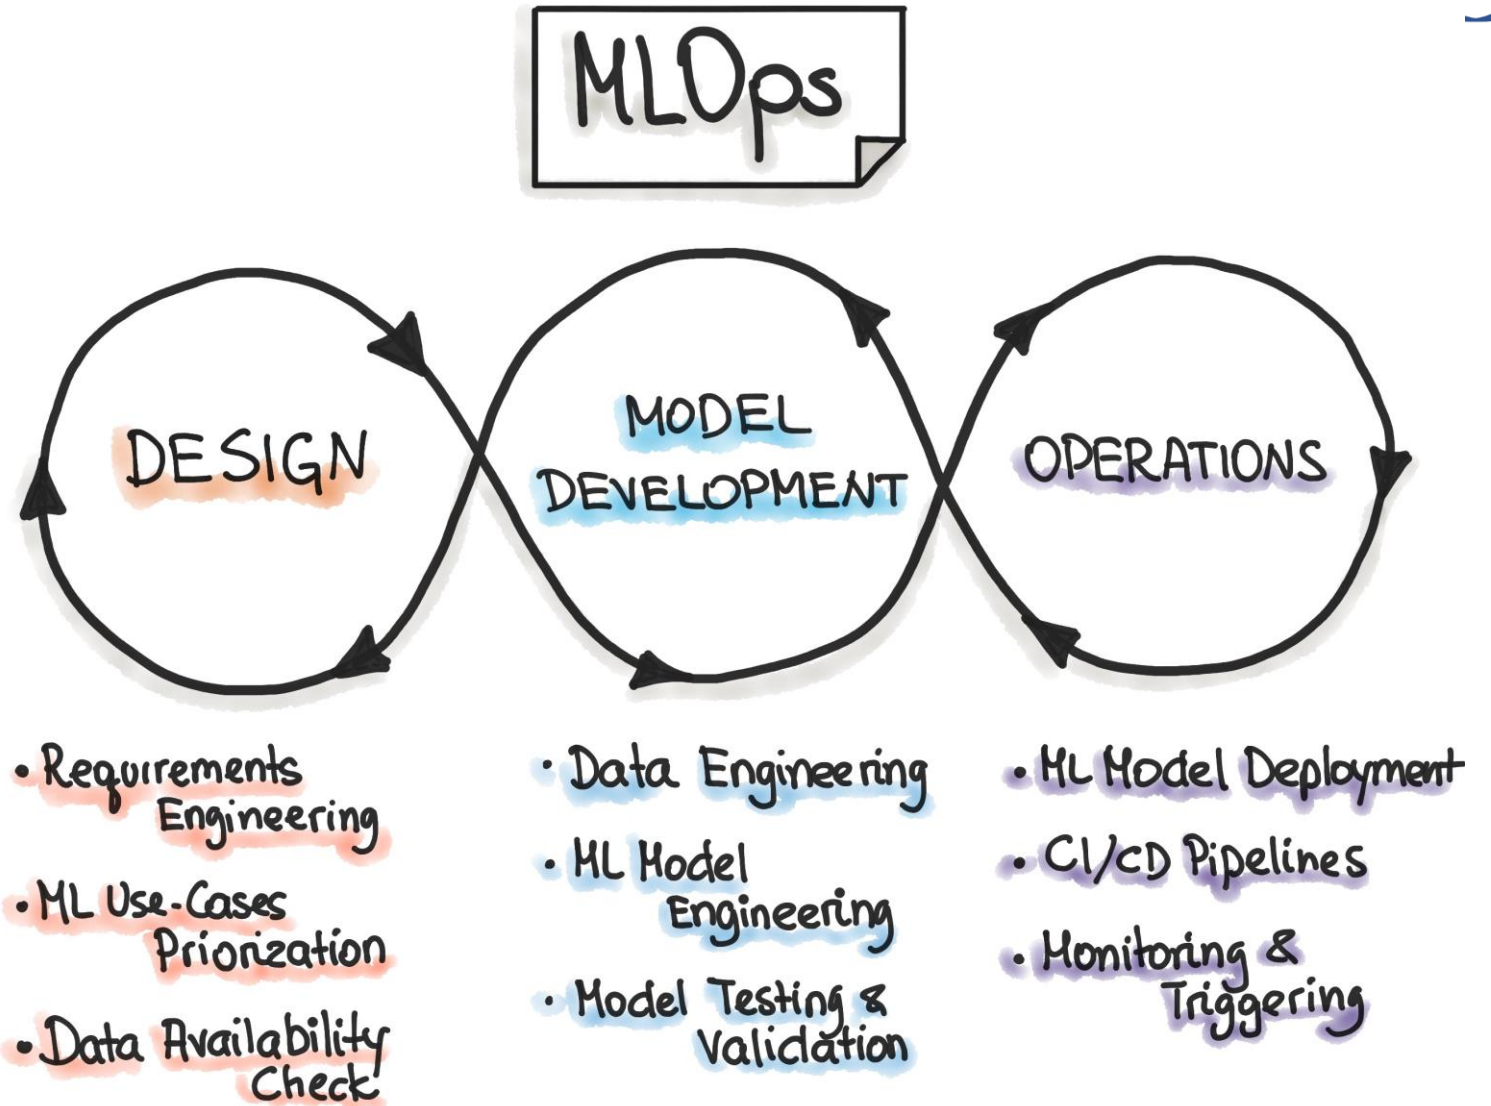

DTU Compute

What is machine learning operations

Everything required to keep a model working for long periods of time

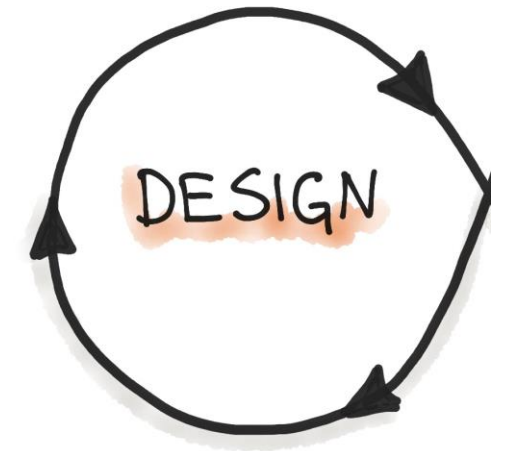

Notice: ITS A CYCLE!

Design

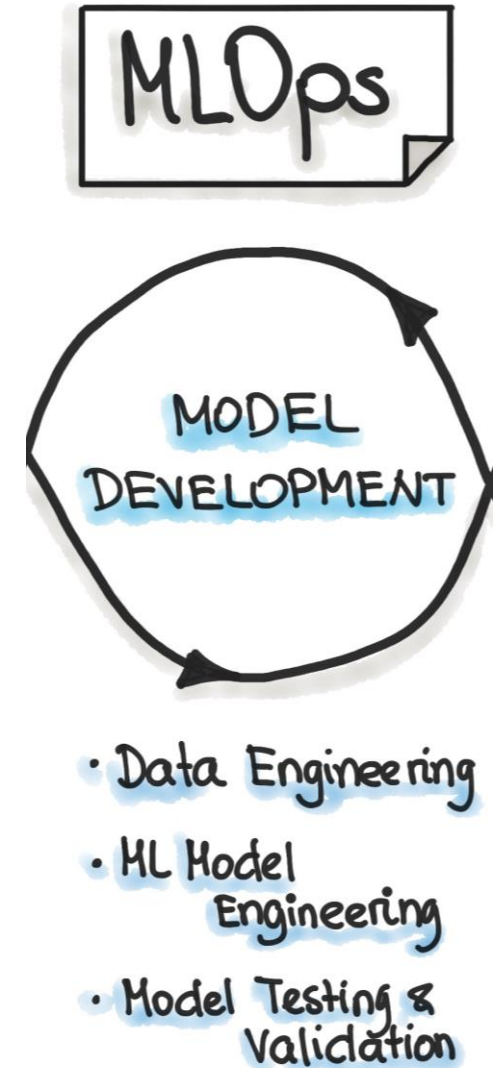

- This is the main part we train you at DTU
 - Analyze a problem
 - Look in literature for references
 - Check if you have access to data for investigating this

- Requirements Engineering
- ML Use-Cases Priorization
- Data Availability Check

- This is model specific

- This is not taught at all
- My hope is that you will get at feeling of this topic

- ML Model Deployment
- CI/CD Pipelines
- Monitoring & Triggering
